Re: Syracuse Glass- Qualified Fabricator

Syracuse Glass has demonstrated a high level of proficiency in the fabrication of AGC's coated low emissivity glasses. The cutting and tempering departments fully understand the requirements of fabricating coated products.

Syracuse Glass maintains SGCC (Safety Glazing Certification Council) and IGCC (Insulating Glass Certification Council) certifications as further evidence of their commitment to producing a quality product for their customers. Therefore, AGC Glass Company North America considers Syracuse Glass qualified to fabricate AGC's high performance glass products for commercial glazing applications.
